

BAM REVISION 1.4

OTO Machines - april 2018

BAM revision 1.4 adds new features and fixes a bug with CC number 18.

1. NEW FEATURES:

1.1/ One new FX Type : THRU. It lets you use the whole BAM circuitry (pre-delay, input gain, filters and 16-bit AD & DA conversion) but without reverb. The REVERB TIME and DAMPING pots and CHORUS parameter are inactive in this mode.

The TYPE parameter has now 8 settings : Room, Hall, Plate, Ambient, Chorus, Non-Linear, Primitive and Thru.

In this mode you can add a simple delay with the P-DELAY pot or the TAP switch.

1.2/ TAP DISPLAY : TAP tempo display can be set to ON or OFF.

This setting is accessible by pressing the TAP switch while powering BAM on.

Each time you press the TAP switch while powering BAM on, the TAP display is alternatively set to ON or OFF. This setting is kept in memory.

As soon as you turn the P-DELAY pot, the TAP switch stops flashing.

Please note that only the « TAP to Pre-Delay time » feature works.

The « TAP to reverb time » doesn't work in this revision.

2. BUG FIXES:

2.1/ CC number 18 (Type) was not working. Fixed on this revision.
